

Startup Journey 2026 Pre-Assignment: One Pager Website

One important tool for Startup Journey is your startup's One Pager. It is a concise overview of your startup idea, current status, and key assumptions.

The One Pager is mainly used to help mentors and coaches quickly understand your startup before mentoring sessions. Because of this, it is important that the information is clear, concise, precise, and up to date.

This year's format: One Pager as a website

This year, the One Pager must be created as a website.

Your team should create a simple website where all the required One Pager information is presented clearly. The website does not need to be technically complex or visually perfect. The most important thing is that the content is easy to read, easy to update, and accessible to mentors and coaches.

You can use any suitable tool or platform, or your own custom website.

The website must be updated weekly during Startup Journey.

Why we use One Pagers

The One Pager is mainly used during the program for mentoring. One Pagers will be shared with mentors before mentoring sessions so they can prepare and understand your startup's current situation.

Since most of you are in the early stages of validating your idea, there is no need to go too deep into details. Focus on communicating the essentials clearly.

Pre-assignment

Start the process by answering the questions and topics below on your One Pager website.

At this stage, do not worry too much about making everything perfect. The goal is to create a first version that we can improve during the program.

Be concise and precise, but make sure the most important information is included.

Recommended resources

If you have not already checked these resources, now is a good time to do so:

- *The Mom Test* — Rob Fitzpatrick
- *Running Lean* — Ash Maurya
- *The Lean Startup* — Eric Ries

What your One Pager website should include

Your One Pager website should cover at least the following topics:

Problem

What pain or problem are you solving? Who has this problem? How acute or important is it?

Solution

What are you building? What is the core mechanism or main idea behind your solution? What makes you different from existing alternatives?

Stage

Where are you currently? For example: idea, prototype, MVP, pilot, early revenue, or something else.

Traction

What signals do you already have? For example: users, customer interviews, pilots, letters of intent, early sales, partnerships, or other validation.

Market

What is the market opportunity? How large is the market, and why is now the right time for this solution?

Business model

How do you plan to make money? If you do not know yet, describe your current hypothesis.

Team

Who is in the team? Why is this the right team to work on this problem? Include relevant background, skills, or experience.

Ask

What do you specifically need help with from mentors? Be concrete. For example: customer validation, pricing, sales, product development, market understanding, fundraising, or focus. You can also include the pressing question or problem you are battling with.

Weekly updates

Your team is expected to update the One Pager website every week during Startup Journey.

The purpose of the weekly updates is to keep the information current and to show how your thinking, validation, and startup idea are developing during the program.

Update the page whenever something important changes, such as:

- customer insights
- problem definition
- target customer segment
- solution direction
- traction or validation
- business model
- team situation
- mentor ask

Keep it clear and concise

The One Pager should be easy to understand at a glance. Avoid long paragraphs and unnecessary details.

Focus on what matters most right now.

Be clear. Be concise. Keep it up to date.
